SUMMARY

Decision science and analytics professional with 10+ years of experience advising public- and private-sector decision-makers on strategic, investment and market decisions in the Gulf. Track record of leading analytical work from framing the decision and modeling options under uncertainty to briefing senior stakeholders with clear recommendations.

CORE COMPETENCIES

- **Decision modeling:** Optimization (linear programming, metaheuristics), simulation, reinforcement learning, scenario and sensitivity analysis, decision analysis under uncertainty
- **Strategy and economic analysis:** Strategic and investment planning, market and pricing analysis, project and asset valuation, risk assessment, commercial and regulatory options appraisal
- **Advisory and leadership:** Stakeholder management, executive briefings and presentations, end-to-end project leadership, mentoring
- **Tools:** Python, R, C++, Excel (advanced)

PROFESSIONAL EXPERIENCE

DERASAT, Bahrain Center for Strategic, International and Energy Studies Jun 2014 – Jan 2026

Senior Analyst, Economics and Energy Studies Program (progressed from entry-level roles since 2014)

- Led advisory engagements for government and industry stakeholders, from problem definition and option design to final recommendations, on energy markets, infrastructure investment and commercial strategy.
- Advised senior government decision-makers through briefings, workshops and written recommendations that informed their decisions, often in non-public settings.
- Served as a primary analytical interface with government entities, industry participants and international forums.
- Built decision-support analyses of market dynamics, risks and trade-offs, including LNG supply and pricing scenarios and the commercial and regulatory case for GCC electricity trading.
- Owned the client relationship for a commissioned study on sovereign wealth fund governance and fiscal strategy for a national chamber of commerce, and delivered most of its analysis and recommendations.
- Authored 10+ industry reports and studies, including The Future of LNG Markets (2019) and Challenges Facing Power Markets (2018, with the GCC Interconnection Authority).
- Supervised and mentored junior staff on analytical engagements.

SELECTED PROJECT

- **Energy asset valuation:** Developed and tested deep reinforcement-learning models (SAC, PPO, TD3) to value operating flexibility in a natural-gas storage asset for investment and capacity-leasing decisions, including out-of-period validation (MSc project, 2024).

SPEAKING

- Speaker and panelist at 10+ regional forums, seminars and executive briefings, including the GCC Power Trading Forum (Kuwait, 2019), the Gulf Intelligence UAE Energy Forum (Abu Dhabi, 2020), the ICA Conference (2019) and the Bahrain Economists Society (2019).

EDUCATION

MSc, Industrial Engineering (Operations Research), Boğaziçi University 2024

MA, Economics, minor in Finance, State University of New York at Binghamton; Fulbright Scholar 2011

BSc, Business Information Systems, University of Bahrain 2008
