Profile: Decision science and analytics professional combining operations research with analytical advisory experience to frame problems, evaluate alternatives and translate evidence into recommendations for strategic and operational decisions.

Core competencies

- **Business analysis and decision modelling:** Frame business questions, identify key drivers and use data and models to assess value, evaluate alternatives and support decisions.
- **Advisory and stakeholder communication:** Translate complex findings into practical recommendations, explaining their implications, assumptions and risks.
- **Technical skills:** Optimization, simulation and statistical modelling; programming in Python, R and C++.

Professional experience

DERASAT

June 2014 - January 2026

Bahrain Center for Strategic, International and Energy Studies | Bahrain

Senior Analyst | Earlier roles: Analyst and Assistant Researcher

Economics and Energy Studies Program | Analytical research and advisory support

- Framed strategic questions in energy economics as analytical problems, defining objectives, key drivers and evidence needs; selected comparative and scenario methods suited to the question.
- Analysed production, consumption, pricing and cost data to compare market conditions and assess competitiveness, including LNG supply trends and pricing scenarios.
- Evaluated commercial and regulatory trade-offs in GCC electricity trading, translating market evidence and comparative analysis into recommendations on market development and preparedness.
- Delivered independent and collaborative studies, including substantial work on sovereign wealth fund governance and fiscal strategy for the Bahrain Chamber of Commerce; communicated findings through reports, presentations and industry commentary.

Selected decision modelling projects

- **Energy asset valuation:** Developed and evaluated a reinforcement-learning approach to natural-gas storage valuation for investment and capacity-leasing decisions. Modelled the value of operating flexibility: adjusting buying, storage and selling as prices change, accounting for capacity limits and operating costs. MSc thesis, Boğaziçi University, 2024.
- **Routing and logistics modelling:** Applied an Ant Colony System heuristic to the Travelling Salesman Problem with Profits, modelling route selection and profit-cost trade-offs. Boğaziçi University project.

Education

Boğaziçi University | 2024

MSc Industrial Engineering | Operations Research focus

State University of New York at Binghamton | 2011

MA Economics | Finance minor; Fulbright fellowship

University of Bahrain | 2008

BSc Business Information Systems
